CONCERNING IMPROVING ACCESS TO CHILDHOOD IMMUNIZATIONS, AND, IN CONNECTION THEREWITH, MAKING AN APPROPRIATION.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Legislative declaration. (1) The general assembly hereby finds that:

(a) Colorado's current system of financing and delivering childhood immunizations is complicated and presents barriers for providers, patients, and payers;

(b) The current fragmented system creates access issues because some small and rural providers are unable to afford to stock and deliver vaccine, thus forcing the patient to seek immunizations elsewhere and eroding the medical home;

Capital letters indicate new material added to existing statutes; dashes through words indicate deletions from existing statutes and such material not part of act.

(c) Many of Colorado's primary care providers report that, in a private office setting, the cost to purchase and deliver childhood immunizations is second only to the cost of personnel, resulting in many providers being unable to offer immunizations;

(d) Colorado's primary care providers are required to keep different inventory and accounting systems for vaccine stock, based on the insurance status of patients, resulting in a "two drawer" system;

(e) Recent changes in federal law prohibit local public health agencies from providing federally funded immunizations to patients with private insurance, including situations in which a primary care provider is unable to offer immunizations and refers a patient to the local public health agency;

(f) In the future, local public health agencies will only be able to provide immunizations to insured children if the family is able to pay for the cost of the vaccine or the agency implements a sophisticated billing procedure with each private payer;

(g) Vaccines for children enrolled in the state's medicaid program are received from the vaccines for children program, taking advantages of economies of scale and bulk purchasing power;

(h) Vaccines for the children's basic health plan are purchased in the commercial market, creating a fragmented funding system for the state's public health programs;

(i) The current patchwork of conflicting vaccine financing and requirement system makes it difficult to respond to disease outbreaks with a statewide, systematic plan and response;

(j) In order to ease the administrative and financial burdens on the state's primary care providers and thus expand access to vaccines for Colorado children, the state needs to take a comprehensive look at the current system of vaccine financing and delivery;

(k) Allowing provider choice in any purchasing system aids in the most effective and efficient management of a patient's care and supports

stable vaccine supply for the community; and

(l) Colorado is in a unique position to examine existing models, as well as proposed models, for vaccine financing and delivery in order to create an efficient solution designed with cost savings and effective administration in mind.

SECTION 2. In Colorado Revised Statutes, 25-4-1705, **amend** (9) (b) as follows:
