## **Department of Legislative Services**

Maryland General Assembly 2014 Session

#### FISCAL AND POLICY NOTE

House Bill 331

(Delegate Glass, et al.)

**Economic Matters** 

#### **Electricity - Smart Meters - Disclosure of Usage Data**

This bill prohibits an electric company from disclosing usage data obtained from a "smart meter" to a third party – except for billing purposes or to support "customer choice" – without the customer's written consent. A customer that is aggrieved by an unauthorized disclosure of usage data may file a written complaint with the Public Service Commission (PSC). PSC may not require a customer to prove damage. PSC must investigate the allegations after the filing of a complaint, and may dismiss the complaint or conduct any further investigation it deems necessary. An electric company that violates the disclosure provisions is liable to each affected customer for a penalty of \$1,000 for each unauthorized disclosure of usage data. The bill does not prevent a customer from exercising any right, seeking any other remedy, or filing a complaint with any other agency or court.

The bill takes effect June 1, 2014.

# **Fiscal Summary**

**State Effect:** PSC can implement the bill with existing budgeted resources. Revenues are not materially affected.

**Local Effect:** Minimal.

**Small Business Effect:** Minimal.

#### **Analysis**

**Bill Summary:** "Smart meter" means a digital meter that allows two-way communication between an electric customer's premises and an electric company through a wireless network.

**Current Law:** In general, a person may not furnish or put in use for revenue billing purposes a gas or electric meter unless PSC has authorized the meter's use. By written request, a customer may compel PSC to inspect and test the customer's electric or gas meter. PSC regulations pertaining to the metering of electricity specify that all electricity sold by an electric company must be on the basis of meter measurement, except for installations where the usage is constant and the consumption may be readily computed, or as otherwise provided for in its filed tariff rates.

"Customer choice" means the right of electricity suppliers and customers to utilize and interconnect with the electric distribution system on a nondiscriminatory basis at rates, terms, and conditions of service comparable to the electric company's own use of the system to distribute electricity from an electricity supplier to a customer, under which a customer has the opportunity to purchase electricity from the customer's choice of licensed electricity suppliers.

#### PSC Civil and Criminal Penalties

In addition to any other penalty authorized, PSC may impose a civil penalty of up to \$25,000 against a person who violates specified provisions or an outstanding direction, order, rule, or regulation of PSC. Each day or part of a day the violation continues is a separate offense.

An individual who knowingly aids or abets a public service company in violating PSC rules, orders, and regulations is guilty of a misdemeanor and unless a different punishment is specified, on conviction is subject to a fine of up to \$1,000 for a first offense and up to \$5,000 for a subsequent offense.

**Background:** The State is in the process of transitioning to smart meters as its major electric companies continue to replace traditional analog meters with smart meters under plans authorized by PSC. In May 2012 PSC issued an interim order (No. 84926) allowing customers to decline smart meter installation until PSC makes a final ruling. A final order from PSC is anticipated in early 2014. For more information related to smart meters and their installation in the State, including more details related to customer opt-outs, see the **Appendix – Smart Meter Deployment**.

#### **Additional Information**

**Prior Introductions:** HB 1066 of 2013, a similar bill, was referred to interim study by the House Economic Matters Committee.

### **Appendix – Smart Meter Deployment**

Advanced metering infrastructure (AMI), which includes "smart meters" replacing traditional analogue meters at customer residences, is seen as a key component for enabling smart grid technology. The deployment of AMI enables customers to see and respond to market-based pricing. Smart grid technology incorporating AMI can assist in increasing grid reliability, reducing blackout probabilities, reducing forced outage rates, and can help to restore power in shorter time periods.

The Public Service Commission (PSC) authorized Baltimore Gas and Electric Company (BGE) to deploy smart meters in August 2010. PSC later authorized Potomac Electric Power Company (Pepco) to deploy smart meters in September 2010 and Delmarva Power and Light (DPL) in May 2012. The Southern Maryland Electric Cooperative also has a PSC-approved pilot program in part of its service territory. Combined, PSC has authorized the installation of more than 2.6 million smart meters. As of January 2014, BGE had completed approximately 867,000 of its nearly two million installations, and Pepco had completed nearly all of its more than 550,000 installations. The companies report opt-out/deferral rates of 3.6% and 0.4%, respectively. DPL had also installed more than 175,000 smart meters as of January 2014 and anticipates completing installations in 2014.

Among the general public and the General Assembly, there remains some concern about the widespread deployment of smart meters, particularly in relation to customer privacy and safety. HB 878 of 2012 (failed) would have required electric companies to offer an "opt-out" option from smart meter installations. However, in May 2012 PSC issued an interim order (No. 84926) allowing customers to decline smart meter installation until PSC makes a final ruling. In January 2013 PSC issued another order (No. 85294) that preserved the interim opt-out and required BGE, Pepco, and DPL to submit, by July 1, 2013, their proposals regarding the overall additional costs associated with allowing customers to retain their current analog meter, cost-recovery proposals, and proposals related to offering either radio frequency (RF)-free or RF-minimizing meter options. PSC held a hearing in August 2013 concerning the proposals.

Smart meter opt-out provisions are taking place in other states, and often include a customer charge for those customers wishing to opt out to cover the cost of maintaining a separate meter reading labor force and infrastructure. In California, for example, most customers of Pacific Gas and Electric Company must pay a one-time fee of \$75 and a monthly charge of \$10 to opt out of the program (low-income customers pay less).
