

115TH CONGRESS
1ST SESSION

H. RES. 334

Expressing the sense of the House of Representatives regarding grid modernization.

IN THE HOUSE OF REPRESENTATIVES

MAY 17, 2017

Mr. MCNERNEY (for himself and Mr. LATTA) submitted the following resolution; which was referred to the Committee on Energy and Commerce, and in addition to the Committee on Science, Space, and Technology, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

RESOLUTION

Expressing the sense of the House of Representatives
regarding grid modernization.

- 1 *Resolved*, That it is the sense of the House of Rep-
- 2 resentatives that it should be the policy of the United
- 3 States to promote and advance—
- 4 (1) the modernization of the energy delivery in-
- 5 frastructure of the United States, and bolster the re-
- 6 liability, affordability, diversity, efficiency, security,
- 7 and resiliency of domestic energy supplies, through
- 8 advanced grid technologies;

- 1 (2) the modernization of the electric grid to en-
2 able a robust multi-directional power flow that lever-
3 ages centralized energy resources and distributed en-
4 ergy resources, enables robust retail transactions,
5 and facilitates the alignment of business and regu-
6 latory models to achieve a grid that optimizes the
7 entire electric delivery system;
- 8 (3) relevant research and development in ad-
9 vanced grid technologies, including—
10 (A) energy storage;
11 (B) predictive tools and requisite real-time
12 data to enable the dynamic optimization of grid
13 operations;
14 (C) power electronics, including smart in-
15 verters, that ease the challenge of intermittent
16 renewable resources and distributed generation;
17 (D) real-time data and situational aware-
18 ness tools and systems; and
19 (E) tools to increase data security, physical
20 security, and cybersecurity awareness and pro-
21 tection;
- 22 (4) the leadership of the United States in basic
23 and applied sciences to develop a systems approach
24 to innovation and development of cyber-secure ad-
25 vanced grid technologies, architectures, and control

1 paradigms capable of managing diverse supplies and
2 loads;

3 (5) the safeguarding of the critical energy delivery infrastructure of the United States and the enhanced resilience of the infrastructure to all hazards, including—

7 (A) severe weather events;
8 (B) cyber and physical threats; and
9 (C) other factors that affect energy delivery;

11 (6) the coordination of goals, investments to optimize the grid, and other measures for energy efficiency, advanced grid technologies, interoperability, 12 and demand response-side management resources;

15 (7) partnerships with States and the private sector—

17 (A) to facilitate advanced grid capabilities 18 and strategies; and

19 (B) to provide technical assistance, tools, 20 or other related information necessary to enhance 21 grid integration, particularly in connection with 22 the development at the State and local levels of 23 strategic energy, energy surety and assurance, 24 and emergency preparedness, response, 25 and restoration planning;

1 (8) the deployment of information and communications technologies at all levels of the electric system;

4 (9) opportunities to provide consumers with timely information and advanced control options;

6 (10) sophisticated or advanced control options to integrate distributed energy resources and associated ancillary services;

9 (11) open-source communications, database architectures, and common information model standards, guidelines, and protocols that enable interoperability to maximize efficiency gains and associated benefits among—

14 (A) the grid;

15 (B) energy and building management systems; and

17 (C) residential, commercial, and industrial equipment;

19 (12) private sector investment in the energy delivery infrastructure of the United States through targeted demonstration and validation of advanced grid technologies; and

1 (13) establishment of common valuation meth-
2 ods and tools for cost-benefit analysis of grid inte-
3 gration paradigms.
