103	0.5 and Minimum f'c from 4,500 psi to 3,000 psi."
104	(4) IBC, Section 1904.4.1 is deleted and replaced with the following:
105	"1904.4.1 Air Entrainment. Concrete that extends above grade and is exposed to
106	freezing and thawing while moist shall be air entrained in accordance with ACI 318, Section
107	<u>4.4.1."</u>
108	Section 3. Section 15A-3-113 is amended to read:
109	15A-3-113. Amendments to Chapters 32 through 35 of IBC.
110	(1) A new section IBC, Section 3401.6, is added as follows: "3401.6 Parapet bracing,
111	wall anchors, and other appendages. Buildings constructed before 1975 shall have parapet
112	bracing, wall anchors, and appendages such as cornices, spires, towers, tanks, signs, statuary,
113	etc. evaluated by a licensed engineer when said building is undergoing reroofing, or alteration
114	of or repair to said feature. Such parapet bracing, wall anchors, and appendages shall be
115	evaluated in accordance with 75% of the seismic forces as specified in Section 1613. When
116	allowed by the local building official, alternate methods of equivalent strength as referenced in

117 an approved code under Utah Code, Subsection 15A-1-204(6)(a), will be considered when

accompanied by engineer-sealed drawings, details, and calculations. When found to be

119 deficient because of design or deteriorated condition, the engineer's recommendations to

120 anchor, brace, reinforce, or remove the deficient feature shall be implemented.

121 EXCEPTIONS:

122 1. Group R-3 and U occupancies.

123 2. Unreinforced masonry parapets need not be braced according to the above stated provisions 124 provided that the maximum height of an unreinforced masonry parapet above the level of the 125 diaphragm tension anchors or above the parapet braces shall not exceed one and one-half times 126 the thickness of the parapet wall. The parapet height may be a maximum of two and one-half 127 times its thickness in other than Seismic Design Categories D, E, or F."

(2) IBC, Section 3408.4, is deleted and replaced with the following: "3408.4 Change in
Occupancy. When a change in occupancy results in a structure being reclassified to a higher
Occupancy Category (as defined in Table 1604.5), or when such change of occupancy results in
a design occupant load increase of 100% or more, the structure shall conform to the seismic
requirements for a new structure.

133 Exceptions:

134 1. Specific seismic detailing requirements of this code or ASCE 7 for a new structure shall not 135 be required to be met where it can be shown that the level of performance and seismic safety is 136 equivalent to that of a new structure. Such analysis shall consider the regularity, overstrength, redundancy, and ductility of the structure within the context of the existing and retrofit (if any) 137 138 detailing providing. Alternatively, the building official may allow the structure to be upgraded 139 in accordance with referenced sections as found in an approved code under Utah Code, 140 Subsection 15A-1-204(6)(a). 141 2. When a change of use results in a structure being reclassified from Occupancy Category I or

142 II to Occupancy Category III and the structure is located in a seismic map area where SDS is

143 less than 0.33, compliance with the seismic requirements of this code and ASCE 7 are not

144 required.

145	3. Where design occupant load increase is less than 25 occupants and the Occupancy Category					
146	does not change."					
147	(3) In IBC, Section 3411.1, the exception is deleted and replaced with the following:					
148	"Exception: Type B dwelling or sleeping units required by Section 1107 of this code are not					
149	required to be provided in existing buildings and facilities unless being altered or undergoing a
