ENGROSSED HOUSE BILL 1826

---

AS AMENDED BY THE SENATE

Passed Legislature - 2013 Regular Session

State of Washington                      63rd Legislature                      2013 Regular Session

By Representative Morris

Read first time 02/11/13. Referred to Committee on Environment.

1            AN ACT Relating to updating integrated resource plan requirements  
2 to address changing energy markets; and amending RCW 19.280.010,  
3 19.280.020, 19.280.030, and 19.280.060.

4 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

5            **Sec. 1.** RCW 19.280.010 and 2006 c 195 s 1 are each amended to read  
6 as follows:

7            It is the intent of the legislature to encourage the development of  
8 new safe, clean, and reliable energy resources to meet demand in  
9 Washington for affordable and reliable electricity. To achieve this  
10 end, the legislature finds it essential that electric utilities in  
11 Washington develop comprehensive resource plans that explain the mix of  
12 generation and demand-side resources they plan to use to meet their  
13 customers' electricity needs in both the short term and the long term.  
14 The legislature intends that information obtained from integrated  
15 resource planning under this chapter will be used to assist in  
16 identifying and developing: (1) New energy generation((τ)); (2)  
17 conservation and efficiency resources((τ)); (3) methods, commercially  
18 available technologies, and facilities for integrating renewable

1 resources, including addressing any overgeneration event; and (4)  
2 related infrastructure to meet the state's electricity needs.

3 **Sec. 2.** RCW 19.280.020 and 2009 c 565 s 19 are each amended to  
4 read as follows:

5 The definitions in this section apply throughout this chapter  
6 unless the context clearly requires otherwise.

7 (1) "Commission" means the utilities and transportation commission.

8 (2) "Conservation and efficiency resources" means any reduction in  
9 electric power consumption that results from increases in the  
10 efficiency of energy use, production, transmission, or distribution.

11 (3) "Consumer-owned utility" includes a municipal electric utility  
12 formed under Title 35 RCW, a public utility district formed under Title  
13 54 RCW, an irrigation district formed under chapter 87.03 RCW, a  
14 cooperative formed under chapter 23.86 RCW, a mutual corporation or  
15 association formed under chapter 24.06 RCW, a port district formed  
16 under Title 53 RCW, or a water-sewer district formed under Title 57  
17 RCW, that is engaged in the business of distributing electricity to one  
18 or more retail electric customers in the state.

19 (4) "Department" means the department of commerce.

20 (5) "Electric utility" means a consumer-owned or investor-owned  
21 utility.

22 (6) "Full requirements customer" means an electric utility that  
23 relies on the Bonneville power administration for all power needed to  
24 supply its total load requirement other than that served by  
25 nondispatchable generating resources totaling no more than six  
26 megawatts or renewable resources.

27 (7) "Governing body" means the elected board of directors, city  
28 council, commissioners, or board of any consumer-owned utility.

29 (8) "High efficiency cogeneration" means the sequential production  
30 of electricity and useful thermal energy from a common fuel source,  
31 where, under normal operating conditions, the facility has a useful  
32 thermal energy output of no less than thirty-three percent of the total  
33 energy output.

34 (9) "Integrated resource plan" means an analysis describing the mix  
35 of generating resources (~~and~~), conservation, methods, technologies,  
36 and resources to integrate renewable resources and, where applicable,  
37 address overgeneration events, and efficiency resources that will meet

1 current and projected needs at the lowest reasonable cost to the  
2 utility and its ratepayers and that complies with the requirements  
3 specified in RCW 19.280.030(1).

4 (10) "Investor-owned utility" means a corporation owned by  
5 investors that meets the definition in RCW 80.04.010 and is engaged in  
6 distributing electricity to more than one retail electric customer in  
7 the state.

8 (11) "Lowest reasonable cost" means the lowest cost mix of  
9 generating resources and conservation and efficiency resources  
10 determined through a detailed and consistent analysis of a wide range  
11 of commercially available resources. At a minimum, this analysis must  
12 consider resource cost, market-volatility risks, demand-side resource  
13 uncertainties, resource dispatchability, resource effect on system  
14 operation, the risks imposed on the utility and its ratepayers, public  
15 policies regarding resource preference adopted by Washington state or  
16 the federal government, and the cost of risks associated with  
17 environmental effects including emissions of carbon dioxide.

18 (12) "Plan" means either an "integrated resource plan" or a  
19 "resource plan."

20 (13) "Renewable resources" means electricity generation facilities  
21 fueled by: (a) Water; (b) wind; (c) solar energy; (d) geothermal  
22 energy; (e) landfill gas; (f) biomass energy utilizing animal waste,  
23 solid organic fuels from wood, forest, or field residues or dedicated  
24 energy crops that do not include wood pieces that have been treated  
25 with chemical preservatives such as creosote, pentachlorophenol, or  
26 copper-chrome-arsenic; (g) by-products of pulping or wood manufacturing  
27 processes, including but not limited to bark, wood chips, sawdust, and  
28 lignin in spent pulping liquors; (h) ocean thermal, wave, or tidal  
29 power; or (i) gas from sewage treatment facilities.

30 (14) "Resource plan" means an assessment that estimates electricity  
31 loads and resources over a defined period of time and complies with the  
32 requirements in RCW 19.280.030(2).

33 (15) "Overgeneration event" means an event within an operating  
34 period of a balancing authority when the electricity supply, including  
35 generation from intermittent renewable resources, exceeds the demand  
36 for electricity for that utility's energy delivery obligations and when  
37 there is a negatively priced regional market.

1       **Sec. 3.** RCW 19.280.030 and 2011 c 180 s 305 are each amended to  
2 read as follows:

3       Each electric utility must develop a plan consistent with this  
4 section.

5       (1) Utilities with more than twenty-five thousand customers that  
6 are not full requirements customers shall develop or update an  
7 integrated resource plan by September 1, 2008. At a minimum, progress  
8 reports reflecting changing conditions and the progress of the  
9 integrated resource plan must be produced every two years thereafter.  
10 An updated integrated resource plan must be developed at least every  
11 four years subsequent to the 2008 integrated resource plan. The  
12 integrated resource plan, at a minimum, must include:

13       (a) A range of forecasts, for at least the next ten years or  
14 longer, of projected customer demand which takes into account  
15 econometric data and customer usage;

16       (b) An assessment of commercially available conservation and  
17 efficiency resources. Such assessment may include, as appropriate,  
18 high efficiency cogeneration, demand response and load management  
19 programs, and currently employed and new policies and programs needed  
20 to obtain the conservation and efficiency resources;

21       (c) An assessment of commercially available, utility scale  
22 renewable and nonrenewable generating technologies including a  
23 comparison of the benefits and risks of purchasing power or building  
24 new resources;

25       (d) A comparative evaluation of renewable and nonrenewable  
26 generating resources, including transmission and distribution delivery  
27 costs, and conservation and efficiency resources using "lowest  
28 reasonable cost" as a criterion;

29       (e) An assessment of methods, commercially available technologies,  
30 or facilities for integrating renewable resources, and addressing  
31 overgeneration events, if applicable to the utility's resource  
32 portfolio;

33       (f) The integration of the demand forecasts and resource  
34 evaluations into a long-range assessment describing the mix of supply  
35 side generating resources and conservation and efficiency resources  
36 that will meet current and projected needs, including mitigating  
37 overgeneration events, at the lowest reasonable cost and risk to the  
38 utility and its ratepayers; and

1        ~~((f))~~ (g) A short-term plan identifying the specific actions to  
2 be taken by the utility consistent with the long-range integrated  
3 resource plan.

4        (2) All other utilities may elect to develop a full integrated  
5 resource plan as set forth in subsection (1) of this section or, at a  
6 minimum, shall develop a resource plan that:

7            (a) Estimates loads for the next five and ten years;

8            (b) Enumerates the resources that will be maintained and/or  
9 acquired to serve those loads; and

10          (c) Explains why the resources in (b) of this subsection were  
11 chosen and, if the resources chosen are not: (i) Renewable resources  
12 ~~((e))~~; (ii) methods, commercially available technologies, or  
13 facilities for integrating renewable resources, including addressing  
14 any overgeneration event; or (iii) conservation and efficiency  
15 resources, why such a decision was made.

16          (3) An electric utility that is required to develop a resource plan  
17 under this section must complete its initial plan by September 1, 2008.

18          (4) Resource plans developed under this section must be updated on  
19 a regular basis, at a minimum on intervals of two years.

20          (5) Plans shall not be a basis to bring legal action against  
21 electric utilities.

22          (6) Each electric utility shall publish its final plan either as  
23 part of an annual report or as a separate document available to the  
24 public. The report may be in an electronic form.

25        **Sec. 4.** RCW 19.280.060 and 2006 c 195 s 6 are each amended to read  
26 as follows:

27        The department shall review the plans of consumer-owned utilities  
28 and investor-owned utilities, and data available from other state,  
29 regional, and national sources, and prepare an electronic report to the  
30 legislature aggregating the data and assessing the overall adequacy of  
31 Washington's electricity supply. The report shall include a statewide  
32 summary of utility load forecasts, load/resource balance, and utility  
33 plans for the development of thermal generation, renewable resources,  
34 ~~((and))~~ conservation and efficiency resources, and an examination of  
35 assessment methods used by utilities to address overgeneration events.  
36 The commission shall provide the department with data summarizing the

1 plans of investor-owned utilities for use in the department's statewide  
2 summary. The department may submit its report within the biennial  
3 report required under RCW 43.21F.045.

Passed by the House April 22, 2013.

Passed by the Senate April 17, 2013.

Approved by the Governor May 7, 2013.

Filed in Office of Secretary of State May 7, 2013.
